Art Unit: 2872

1. Applicant's election with traverse of species "A", depicted by Fig. 4 in the reply filed on June 27, 2005 is acknowledged. The traversal would appear to be on the ground(s) that there would be no undue burden to examine the non-elected species along with the elected species. This is not found persuasive because the restriction requirement set forth in the communication mailed on June 3, 2005 is based on the claimed structural differences between the various species and not on their similarities. Continued search and examination of claims to a non-elected species having substantially different structural limitations is a prima facie showing of burden. Applicant may overcome the requirement for restriction by presenting an allowable linking claim or by providing a clear admission on the record that the claim(s) drawn to a given non-elected species is not patentably distinct from the elected species.

Please note that 37 CFR 1.141(a) clearly states that more than one species of an invention may be claimed in an application, provided that the application includes an allowable generic (linking) claim to all the claimed species and all the claims to species in excess of one are written in dependent form or otherwise include all the limitations of the generic (linking) claim.

The requirement is still deemed proper and is therefore made FINAL.

2. Claim 4 is withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species. Applicant timely traversed the restriction (election) requirement in the reply filed on July 20, 2005.

3. This application contains claims directed to the following patentably distinct species of the claimed invention:

1). The mirror housing is positioned in the retracted origin position at the time when an ignition key is turned to an "ACC" position.

Art Unit: 2872

2). The mirror housing is positioned in the retracted origin position at the time when doors of the vehicle are unlocked.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 8 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2872

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
